Education

Northeastern University, Boston, MA — September 2024 – December 2027
Honors Candidate for B.S. in Computer Science and Business Administration — GPA: 3.92/4.0
Concentration in Marketing Analytics

- **Honors:** Dean's List (F24, SP25, F25), John Martinson Honors Program
- **Relevant Coursework:** Algorithms and Data, Object Oriented Design, Databases, Computer Systems, Discrete Structures, Foundations of Software Engineering, Quantitative Analysis of Consumer Data, Projects in UX Design

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, PHP, HTML, CSS, Racket BSL, R
Libraries/Frameworks: React.js, Next.js, TanStack Query, Node.js, Prisma ORM, Vue.js, oTree, TailwindCSS, JUnit
Tools: Git, Docker, Vercel, PostgreSQL, Claude Code, Vite, Grafana, Splunk, Heroku, Storybook.js, Postman, Figma

Experience

Software Engineering Intern — May 2026 – Present
Workiva — *Remote*

- Engineering an end-to-end permissions management system by building TanStack Query hooks to support cached bulk access changes for the Files page, Workiva's regulatory file management service for 6,600+ organizations
- Extended the permission dialog with role gating, group membership counts, email invites for new collaborators, and a guard for unsaved changes in React by diffing role assignment to ensure only modified roles reached the API
- Enabled rename support across 5 file entity types with type-specific error messaging and migrated the file table from client-side to server-driven sorting through a hook mapping grid state to API ordering params

Executive Director — July 2026 – Present
Sandbox — *Boston, MA*

- Lead organizational strategy and technical direction for 75+ developers, brand designers, and UX researchers building client and community projects by leading weekly standups, general meetings, and project leadership syncs
- Allocate a $14K annual budget across company and club events, prioritizing infrastructure funding for the club's most active course scheduling suite of tools, which actively supports 500,000+ annual visitors campus-wide
- Direct the entire project acquisition pipeline by handling outreach, evaluating project proposals based on feasibility, leading client discovery meetings, and coordinating handoff including deployment and maintenance

Software Engineering Co-op — January 2026 – May 2026
SimpliSafe — *Boston, MA*

- Architected a database-backed normalization system in PHP to replace hard-coded stock keeping unit swaps, building admin CRUD tooling that made inventory switches editable by operations teams without code deploys
- Pioneered implementation of new order status models for warehouse agents by mapping new statuses to legacy fields for a backwards-compatible migration across 6 Order Management and Fulfillment services
- Earned first place in a company-wide hackathon among 38 teams by creating a local LLM pipeline that parsed standup transcripts to extract ticket action items and blockers, syncing approved changes through the Jira MCP

Projects

Market Research Study | *Python, oTree, Heroku, PostgreSQL*

- Developed a behavioral economics experiment in Python using oTree, implementing dynamic role assignment, randomized loss modeling, and inspection functionality to study how shared risk and incentives shape decisions
- Deployed a full-stack experiment on Heroku with PostgreSQL, designing a data schema and custom CSV export pipeline to capture data per participant according to stakeholder requirements
- Implemented evolving research requirements by building out each of 3 increasingly elaborate conditions from a written spec and conducting demos for feedback through weekly stakeholder check-ins

Interests

Baking, cooking, handwriting and illustrating recipes, field hockey, running
